## **-Development**

### **What Development Promises – Different Peoples, Different Goals:**

- Development goals vary among individuals.
- What constitutes development for one person might not be the same for another.
- Income is a crucial aspect, but development also encompasses non-material aspects like freedom, equality, and security.

### **National Development**

- Different individuals can have diverse and even conflicting perspectives on a nation's development.
- Development often involves achieving a balance between various goals like economic growth, social justice, environmental sustainability, etc.

### **Comparing Different Countries or States**

- Comparing countries based solely on total income can be misleading due to differences in population.
- Per capita income, which is the average income per person, is a more accurate measure for comparison.
- World Development Reports often use per capita income to classify countries into different categories based on their level of development.

### **Income and Other Criteria**

- Besides income, access to public facilities like healthcare, education, infrastructure, and sanitation is crucial for assessing development.
- These public facilities contribute significantly to the overall well-being and quality of life of citizens.

### **Sustainability of Development**

- Sustainable development aims to meet the needs of the present without compromising the ability of future generations to meet their own needs.
- It involves responsible use of resources and environmental conservation to ensure long-term viability.
- Overuse of groundwater, depletion of natural resources, and environmental degradation are some of the challenges to sustainable development.

### **Conclusion**

- Development is a multifaceted concept encompassing economic, social, and environmental dimensions.
- Achieving sustainable development requires a holistic approach that balances economic growth with social equity and environmental stewardship.
