

**NCERT Solutions for Class 7 Maths Chapter 11:** NCERT Solutions for Class 7 Maths Chapter 11 cover the important concepts of perimeter and area. This chapter introduces students to the fundamental principles of measuring the boundary length (perimeter) and enclosed space (area) of geometric shapes like rectangles, squares, and triangles. The solutions provided in this chapter provide step-by-step explanations to help students understand and solve problems related to calculating perimeter and area accurately. By practicing with these solutions, students can strengthen their grasp of these essential geometric concepts and improve their problem-solving skills.

## **NCERT Solutions for Class 7 Maths Chapter 11 PDF**

The PDF link for NCERT Solutions for Class 7 Maths Chapter 11 is provided below. This PDF contains detailed solutions to all the questions presented in the chapter. Students can use these solutions to enhance their understanding of the topics covered in Chapter 11, "Perimeter and Area," by following step-by-step explanations. Accessing the PDF will be beneficial for students preparing for their exams, as it offers a valuable resource for practicing and mastering the concepts related to perimeter and area.

### **NCERT Solutions for Class 7 Maths Chapter 11 PDF**

## **NCERT Solutions for Class 7 Maths Chapter 11 PDF Perimeter and Area**

Exercise 11.1 Page: 208

**1. The length and breadth of a rectangular piece of land are 500 m and 300 m, respectively. Find**

**(i) Its area (ii) the cost of the land, if 1 m<sup>2</sup> of the land costs ₹ 10,000.**

**Solution:-**

From the question, it is given that

Length of the rectangular piece of land = 500 m

Breadth of the rectangular piece of land = 300 m

Then,

(i) Area of rectangle = Length × Breadth

= 500 × 300

$$= 150000 \text{ m}^2$$

(ii) Cost of the land for  $1 \text{ m}^2 = ₹ 10000$

Cost of the land for  $150000 \text{ m}^2 = 10000 \times 150000$

$$= ₹ 1500000000$$

**2. Find the area of a square park whose perimeter is 320m.**

**Solution:-**

From the question, it is given that

Perimeter of the square park = 320 m

$$4 \times \text{Length of the side of park} = 320 \text{ m}$$

Then,

$$\text{Length of the side of the park} = 320/4$$

$$= 80 \text{ m}$$

So, the area of the square park =  $(\text{Length of the side of the park})^2$

$$= 80^2$$

$$= 6400 \text{ m}^2$$

**3. Find the breadth of a rectangular plot of land if its area is  $440 \text{ m}^2$  and the length is 22 m. Also, find its perimeter.**

**Solution:-**

From the question, it is given that

Area of the rectangular plot =  $440 \text{ m}^2$

Length of the rectangular plot = 22 m

We know that,

Area of the rectangle = Length  $\times$  Breadth

$$440 = 22 \times \text{Breadth}$$

$$\text{Breadth} = 440/22$$

Breadth = 20 m

Then,

Perimeter of the rectangle =  $2(\text{Length} + \text{Breadth})$

$$= 2(22 + 20)$$

$$= 2(42)$$

$$= 84 \text{ m}$$

$\therefore$  Perimeter of the rectangular plot is 84 m.

**4. The perimeter of a rectangular sheet is 100 cm. If the length is 35 cm, find its breadth.**

**Also, find the area.**

**Solution:-**

From the question, it is given that

Perimeter of the rectangular sheet = 100 cm

Length of the rectangular sheet = 35 cm

We know that,

Perimeter of the rectangle =  $2(\text{Length} + \text{Breadth})$

$$100 = 2(35 + \text{Breadth})$$

$$(100/2) = 35 + \text{Breadth}$$

$$50 - 35 = \text{Breadth}$$

$$\text{Breadth} = 15 \text{ cm}$$

Then,

Area of the rectangle =  $\text{Length} \times \text{Breadth}$

$$= 35 \times 15$$

$$= 525 \text{ cm}^2$$

$\therefore$  Area of the rectangular sheet is  $525 \text{ cm}^2$

**5. The area of a square park is the same as that of a rectangular park. If the side of the square park is 60 m and the length of the rectangular park is 90 m, find the breadth of the rectangular park.**

**Solution:-**

From the question, it is given that

The area of a square park is the same as that of a rectangular park.

Side of the square park = 60 m

Length of the rectangular park = 90 m

We know that,

Area of the square park = (One of the sides of the square)<sup>2</sup>

$$= 60^2$$

$$= 3600 \text{ m}^2$$

Area of the rectangular park = 3600 m<sup>2</sup> ... [∵ given]

$$\text{Length} \times \text{Breadth} = 3600$$

$$90 \times \text{Breadth} = 3600$$

$$\text{Breadth} = 3600/90$$

$$\text{Breadth} = 40 \text{ m}$$

**6. A wire is in the shape of a rectangle. Its length is 40 cm, and its breadth is 22 cm. If the same wire is rebent in the shape of a square, what will be the measure of each side?**

**Also, find which shape encloses more area.**

**Solution:-**

By reading the question, we can conclude that the perimeter of the square is the same as the perimeter of the rectangle.

From the question, it is given that

Length of the rectangle = 40 cm

Breadth of the square = 22 cm

Then,

Perimeter of the rectangle = Perimeter of the Square

$$2 (\text{Length} + \text{Breadth}) = 4 \times \text{side}$$

$$2 (40 + 22) = 4 \times \text{side}$$

$$2 (62) = 4 \times \text{side}$$

$$124 = 4 \times \text{side}$$

$$\text{Side} = 124/4$$

$$\text{Side} = 31 \text{ cm}$$

So, the area of the rectangle = (Length  $\times$  Breadth)

$$= 40 \times 22$$

$$= 880 \text{ cm}^2$$

Area of square = side<sup>2</sup>

$$= 31^2$$

$$= 31 \times 31$$

$$= 961 \text{ cm}^2$$

$\therefore$  Square-shaped wire encloses more area.

**7. The perimeter of a rectangle is 130 cm. If the breadth of the rectangle is 30 cm, find its length. Also, find the area of the rectangle.**

**Solution:-**

From the question, it is given that

Perimeter of the rectangle = 130 cm

Breadth of the rectangle = 30

We know that

Perimeter of rectangle = 2 (Length + Breadth)

$$130 = 2 (\text{length} + 30)$$

$$130/2 = \text{length} + 30$$

$$\text{Length} + 30 = 65$$

$$\text{Length} = 65 - 30$$

$$\text{Length} = 35 \text{ cm}$$

Then,

$$\text{Area of the rectangle} = \text{Length} \times \text{Breadth}$$

$$= 35 \times 30$$

$$= 1050 \text{ cm}^2$$

**8. A door of length 2 m and breadth 1 m is fitted in a wall. The length of the wall is 4.5 m, and the breadth is 3.6 m (Fig). Find the cost of whitewashing the wall if the rate of whitewashing the wall is ₹ 20 per m<sup>2</sup>.**

**Solution:-**

From the question, it is given that

$$\text{Length of the door} = 2 \text{ m}$$

$$\text{Breadth of the door} = 1 \text{ m}$$

$$\text{Length of the wall} = 4.5 \text{ m}$$

$$\text{Breadth of the wall} = 3.6 \text{ m}$$

Then,

$$\text{Area of the door} = \text{Length} \times \text{Breadth}$$

$$= 2 \times 1$$

$$= 2 \text{ m}^2$$

Area of the wall = Length  $\times$  Breadth

$$= 4.5 \times 3.6$$

$$= 16.2 \text{ m}^2$$

So, area to be whitewashed =  $16.2 - 2 = 14.2 \text{ m}^2$

Cost of whitewashing  $1 \text{ m}^2$  area = ₹ 20

Hence, the cost of whitewashing  $14.2 \text{ m}^2$  area =  $14.2 \times 20$

$$= ₹ 284$$

---

Exercise 11.2 Page: 216

1. Find the area of each of the following parallelograms.

(a)

**Solution:-**

From the figure,

Height of parallelogram = 4 cm

Base of parallelogram = 7 cm

Then,

Area of parallelogram = Base  $\times$  Height

$$= 7 \times 4$$

$$= 28 \text{ cm}^2$$

(b)

**Solution:-**

From the figure,

Height of parallelogram = 3 cm

Base of parallelogram = 5 cm

Then,

Area of parallelogram = Base  $\times$  Height

$$= 5 \times 3$$

$$= 15 \text{ cm}^2$$

(c)

**Solution:-**

From the figure,

Height of parallelogram = 3.5 cm

Base of parallelogram = 2.5 cm

Then,

Area of parallelogram = Base  $\times$  Height

$$= 2.5 \times 3.5$$

$$= 8.75 \text{ cm}^2$$

(d)

**Solution:-**

From the figure,

Height of parallelogram = 4.8 cm

Base of parallelogram = 5 cm

Then,

Area of parallelogram = Base  $\times$  Height

$$= 5 \times 4.8$$

$$= 24 \text{ cm}^2$$

(e)

**Solution:-**

From the figure,

Height of parallelogram = 4.4 cm

Base of parallelogram = 2 cm

Then,

Area of parallelogram = Base  $\times$  Height

$$= 2 \times 4.4$$

$$= 8.8 \text{ cm}^2$$

**2. Find the area of each of the following triangles.**

**(a)**

**Solution:-**

From the figure,

Base of triangle = 4 cm

Height of height = 3 cm

Then,

Area of triangle =  $\frac{1}{2} \times$  Base  $\times$  Height

$$= \frac{1}{2} \times 4 \times 3$$

$$= 1 \times 2 \times 3$$

$$= 6 \text{ cm}^2$$

**(b)**

**Solution:-**

From the figure,

Base of triangle = 3.2 cm

Height of height = 5 cm

Then,

Area of triangle =  $\frac{1}{2} \times \text{Base} \times \text{Height}$

$$= \frac{1}{2} \times 3.2 \times 5$$

$$= 1 \times 1.6 \times 5$$

$$= 8 \text{ cm}^2$$

(c)

**Solution:-**

From the figure,

Base of triangle = 3 cm

Height of height = 4 cm

Then,

Area of triangle =  $\frac{1}{2} \times \text{Base} \times \text{Height}$

$$= \frac{1}{2} \times 3 \times 4$$

$$= 1 \times 3 \times 2$$

$$= 6 \text{ cm}^2$$

(d)

**Solution:-**

From the figure,

Base of triangle = 3 cm

Height of height = 2 cm

Then,

Area of triangle =  $\frac{1}{2} \times \text{Base} \times \text{Height}$

$$= \frac{1}{2} \times 3 \times 2$$

$$= 1 \times 3 \times 1$$

$$= 3 \text{ cm}^2$$

**3. Find the missing values.**

S.No.	Base	Height	Area of the Parallelogram
a.	20 cm		246 cm <sup>2</sup>

b.	15 cm	154.5 cm <sup>2</sup>
c.	8.4 cm	48.72 cm <sup>2</sup>
d.	15.6 cm	16.38 cm <sup>2</sup>

**Solution:-**

**(a)**

From the table,

Base of parallelogram = 20 cm

Height of parallelogram =?

Area of the parallelogram = 246 cm<sup>2</sup>

Then,

Area of parallelogram = Base × Height

246 = 20 × height

Height = 246/20

Height = 12.3 cm

∴ Height of the parallelogram is 12.3 cm.

**(b)**

From the table,

Base of parallelogram =?

Height of parallelogram = 15 cm

Area of the parallelogram = 154.5 cm<sup>2</sup>

Then,

Area of parallelogram = Base  $\times$  Height

$$154.5 = \text{base} \times 15$$

$$\text{Base} = 154.5/15$$

$$\text{Base} = 10.3 \text{ cm}$$

$\therefore$  Base of the parallelogram is 10.3 cm.

**(c)**

From the table,

Base of parallelogram = ?

Height of parallelogram = 8.4 cm

Area of the parallelogram = 48.72 cm<sup>2</sup>

Then,

Area of parallelogram = Base  $\times$  Height

$$48.72 = \text{base} \times 8.4$$

$$\text{Base} = 48.72/8.4$$

$$\text{Base} = 5.8 \text{ cm}$$

$\therefore$  Base of the parallelogram is 5.8 cm.

**(d)**

From the table,

Base of parallelogram = 15.6 cm

Height of parallelogram = ?

Area of the parallelogram = 16.38 cm<sup>2</sup>

Then,

Area of parallelogram = Base  $\times$  Height

$$16.38 = 15.6 \times \text{height}$$

$$\text{Height} = 16.38/15.6$$

$$\text{Height} = 1.05 \text{ cm}$$

∴ Height of the parallelogram is 1.05 cm.

S.No.	Base	Height	Area of the Parallelogram
a.	20 cm	12.3 cm	246 cm <sup>2</sup>
b.	10.3 cm	15 cm	154.5 cm <sup>2</sup>
c.	5.8 cm	8.4 cm	48.72 cm <sup>2</sup>
d.	15.6 cm	1.05	16.38 cm <sup>2</sup>

#### 4. Find the missing values.

Base	Height	Area of Triangle
15 cm		87 cm <sup>2</sup>
	31.4 mm	1256 mm <sup>2</sup>
22 cm		170.5 cm <sup>2</sup>

**Solution:-**

**(a)**

From the table,

Height of triangle =?

Base of triangle = 15 cm

Area of the triangle = 16.38 cm<sup>2</sup>

Then,

Area of triangle =  $\frac{1}{2} \times \text{Base} \times \text{Height}$

$$87 = \frac{1}{2} \times 15 \times \text{height}$$

$$\text{Height} = (87 \times 2)/15$$

$$\text{Height} = 174/15$$

$$\text{Height} = 11.6 \text{ cm}$$

∴ Height of the triangle is 11.6 cm.

**(b)**

From the table,

Height of triangle = 31.4 mm

Base of triangle =?

Area of the triangle = 1256 mm<sup>2</sup>

Then,

Area of triangle =  $\frac{1}{2} \times \text{Base} \times \text{Height}$

$$1256 = \frac{1}{2} \times \text{base} \times 31.4$$

$$\text{Base} = (1256 \times 2)/31.4$$

$$\text{Base} = 2512/31.4$$

$$\text{Base} = 80 \text{ mm} = 8 \text{ cm}$$

∴ Base of the triangle is 80 mm or 8 cm.

**(c)**

From the table,

Height of triangle = ?

Base of triangle = 22 cm

Area of the triangle =  $170.5 \text{ cm}^2$

Then,

Area of triangle =  $\frac{1}{2} \times \text{Base} \times \text{Height}$

$170.5 = \frac{1}{2} \times 22 \times \text{height}$

$170.5 = 1 \times 11 \times \text{height}$

Height =  $170.5/11$

Height = 15.5 cm

$\therefore$  Height of the triangle is 15.5 cm.

**5. PQRS is a parallelogram (Fig 11.23). QM is the height from Q to SR, and QN is the height from Q to PS. If SR = 12 cm and QM = 7.6 cm. Find:**

**(a) The area of the parallelogram PQRS (b) QN, if PS = 8 cm**

**Fig 11.23**

**Solution:-**

From the question, it is given that

SR = 12 cm, QM = 7.6 cm

(a) We know that,

Area of the parallelogram = Base  $\times$  Height

= SR  $\times$  QM

$$= 12 \times 7.6$$

$$= 91.2 \text{ cm}^2$$

(b) Area of the parallelogram = Base  $\times$  Height

$$91.2 = PS \times QN$$

$$91.2 = 8 \times QN$$

$$QN = 91.2/8$$

$$QN = 11.4 \text{ cm}$$

**6. DL and BM are the heights on sides AB and AD, respectively, of parallelogram ABCD (Fig 11.24). If the area of the parallelogram is  $1470 \text{ cm}^2$ ,  $AB = 35 \text{ cm}$  and  $AD = 49 \text{ cm}$ , find the length of BM and DL.**

**Fig 11.24**

**Solution:-**

From the question, it is given that

$$\text{Area of the parallelogram} = 1470 \text{ cm}^2$$

$$AB = 35 \text{ cm}$$

$$AD = 49 \text{ cm}$$

Then,

We know that,

$$\text{Area of the parallelogram} = \text{Base} \times \text{Height}$$

$$1470 = AB \times BM$$

$$1470 = 35 \times DL$$

$$DL = 1470/35$$

$$DL = 42 \text{ cm}$$

And,

Area of the parallelogram = Base  $\times$  Height

$$1470 = AD \times BM$$

$$1470 = 49 \times BM$$

$$BM = 1470/49$$

$$BM = 30 \text{ cm}$$

7.  $\Delta ABC$  is right-angled at A (Fig 11.25). AD is perpendicular to BC. If AB = 5 cm, BC = 13 cm, and AC = 12 cm, find the area of  $\Delta ABC$ . Also, find the length of AD.

**Fig 11.25**

**Solution:-**

From the question, it is given that

AB = 5 cm, BC = 13 cm, AC = 12 cm

Then,

We know that,

Area of the  $\Delta ABC = \frac{1}{2} \times \text{Base} \times \text{Height}$

$$= \frac{1}{2} \times AB \times AC$$

$$= \frac{1}{2} \times 5 \times 12$$

$$= 1 \times 5 \times 6$$

$$= 30 \text{ cm}^2$$

Now,

$$\text{Area of } \triangle ABC = \frac{1}{2} \times \text{Base} \times \text{Height}$$

$$30 = \frac{1}{2} \times AD \times BC$$

$$30 = \frac{1}{2} \times AD \times 13$$

$$(30 \times 2)/13 = AD$$

$$AD = 60/13$$

$$AD = 4.6 \text{ cm}$$

8.  $\triangle ABC$  is isosceles with  $AB = AC = 7.5 \text{ cm}$  and  $BC = 9 \text{ cm}$  (Fig 11.26). The height  $AD$  from  $A$  to  $BC$  is  $6 \text{ cm}$ . Find the area of  $\triangle ABC$ . What will be the height from  $C$  to  $AB$ , i.e.,  $CE$ ?

**Fig 11.26**

**Solution:-**

From the question, it is given that

$$AB = AC = 7.5 \text{ cm}, BC = 9 \text{ cm}, AD = 6 \text{ cm}$$

Then,

$$\text{Area of } \triangle ABC = \frac{1}{2} \times \text{Base} \times \text{Height}$$

$$= \frac{1}{2} \times BC \times AD$$

$$= \frac{1}{2} \times 9 \times 6$$

$$= 1 \times 9 \times 3$$

$$= 27 \text{ cm}^2$$

Now,

Area of  $\triangle ABC = \frac{1}{2} \times \text{Base} \times \text{Height}$

$$27 = \frac{1}{2} \times AB \times CE$$

$$27 = \frac{1}{2} \times 7.5 \times CE$$

$$(27 \times 2)/7.5 = CE$$

$$CE = 54/7.5$$

$$CE = 7.2 \text{ cm}$$

Exercise 11.3 Page: 223

**1. Find the circumference of the circle with the following radius. (Take  $\pi = 22/7$ )**

**(a) 14 cm**

**Solution:-**

Given, the radius of the circle = 14 cm

Circumference of the circle =  $2\pi r$

$$= 2 \times (22/7) \times 14$$

$$= 2 \times 22 \times 2$$

$$= 88 \text{ cm}$$

**(b) 28 mm**

**Solution:-**

Given, the radius of the circle = 28 mm

Circumference of the circle =  $2\pi r$

$$= 2 \times (22/7) \times 28$$

$$= 2 \times 22 \times 4$$

$$= 176 \text{ mm}$$

**(c) 21 cm**

**Solution:-**

Given, the radius of the circle = 21 cm

Circumference of the circle =  $2\pi r$

$$= 2 \times (22/7) \times 21$$

$$= 2 \times 22 \times 3$$

$$= 132 \text{ cm}$$

**2. Find the area of the following circles, given that**

**(a) Radius = 14 mm (Take  $\pi = 22/7$ )**

**Solution:**

Given, the radius of the circle = 14 mm

Then,

Area of the circle =  $\pi r^2$

$$= 22/7 \times 14^2$$

$$= 22/7 \times 196$$

$$= 22 \times 28$$

$$= 616 \text{ mm}^2$$

**(b) Diameter = 49 m**

**Solution:**

Given, the diameter of the circle (d) = 49 m

We know that radius (r) =  $d/2$

$$= 49/2$$

$$= 24.5 \text{ m}$$

Then,

$$\text{Area of the circle} = \pi r^2$$

$$= \frac{22}{7} \times (24.5)^2$$

$$= \frac{22}{7} \times 600.25$$

$$= 22 \times 85.75$$

$$= 1886.5 \text{ m}^2$$

**(c) Radius = 5 cm**

**Solution:**

Given, the radius of the circle = 5 cm

Then,

$$\text{Area of the circle} = \pi r^2$$

$$= \frac{22}{7} \times 5^2$$

$$= \frac{22}{7} \times 25$$

$$= \frac{550}{7}$$

$$= 78.57 \text{ cm}^2$$

**3. If the circumference of a circular sheet is 154 m, find its radius. Also, find the area of the sheet. (Take  $\pi = \frac{22}{7}$ )**

**Solution:-**

From the question, it is given that

Circumference of the circle = 154 m

Then,

We know that the circumference of the circle =  $2\pi r$

$$154 = 2 \times \left(\frac{22}{7}\right) \times r$$

$$154 = \frac{44}{7} \times r$$

$$r = (154 \times 7)/44$$

$$r = (14 \times 7)/4$$

$$r = (7 \times 7)/2$$

$$r = 49/2$$

$$r = 24.5 \text{ m}$$

Now,

$$\text{Area of the circle} = \pi r^2$$

$$= 22/7 \times (24.5)^2$$

$$= 22/7 \times 600.25$$

$$= 22 \times 85.75$$

$$= 1886.5 \text{ m}^2$$

So, the radius of the circle is 24.5, and the area of the circle is 1886.5.

**4. A gardener wants to fence a circular garden of diameter 21m. Find the length of the rope he needs to purchase, if he makes 2 rounds of the fence. Also, find the cost of the rope, if it costs ₹ 4 per meter. (Take  $\pi = 22/7$ )**

**Solution:-**

From the question, it is given that

Diameter of the circular garden = 21 m

We know that radius ( $r$ ) =  $d/2$

$$= 21/2$$

$$= 10.5 \text{ m}$$

Then,

$$\text{Circumference of the circle} = 2\pi r$$

$$= 2 \times (22/7) \times 10.5$$

$$= 462/7$$

$$= 66 \text{ m}$$

$$\text{So, the length of rope required} = 2 \times 66 = 132 \text{ m}$$

$$\text{Cost of 1 m rope} = ₹ 4 \text{ [given]}$$

$$\text{Cost of 132 m rope} = ₹ 4 \times 132$$

$$= ₹ 528$$

**5. From a circular sheet of radius 4 cm, a circle of radius 3 cm is removed. Find the area of the remaining sheet. (Take  $\pi = 3.14$ )**

**Solution:-**

From the question, it is given that

Radius of circular sheet  $R = 4 \text{ cm}$

A circle of radius to be removed  $r = 3 \text{ cm}$

Then,

$$\text{The area of the remaining sheet} = \pi R^2 - \pi r^2$$

$$= \pi (R^2 - r^2)$$

$$= 3.14 (4^2 - 3^2)$$

$$= 3.14 (16 - 9)$$

$$= 3.14 \times 7$$

$$= 21.98 \text{ cm}^2$$

So, the area of the remaining sheet is  $21.98 \text{ cm}^2$ .

**6. Saima wants to put lace on the edge of a circular table cover of diameter 1.5 m. Find the length of the lace required, and also, find its cost if one meter of the lace costs ₹ 15. (Take  $\pi = 3.14$ )**

**Solution:-**

From the question, it is given that

Diameter of the circular table = 1.5 m

We know that radius ( $r$ ) =  $d/2$

$$= 1.5/2$$

$$= 0.75 \text{ m}$$

Then,

Circumference of the circle =  $2\pi r$

$$= 2 \times 3.14 \times 0.75$$

$$= 4.71 \text{ m}$$

So, the length of the lace = 4.71 m

Cost of 1 m lace = ₹ 15 [given]

Cost of 4.71 m lace = ₹  $15 \times 4.71$

$$= ₹ 70.65$$

**7. Find the perimeter of the adjoining figure, which is a semicircle, including its diameter.**

**Solution:-**

From the question, it is given that

Diameter of semi-circle = 10 cm

We know that radius ( $r$ ) =  $d/2$

$$= 10/2$$

$$= 5 \text{ cm}$$

Then,

$$\text{Circumference of the semi-circle} = \pi r + 2r$$

$$= 3.14(5) + 2(5)$$

$$= 5 [3.14 + 2]$$

$$= 5 [5.14]$$

Therefore, the perimeter of the semicircle = 25.7 cm
